Preface

In a world full of uncertainty and rapid change, reliable data and facts are essential to provide orientation and reduce complexity. The more the turnaround progresses, the more important it becomes to take a sober and objective view of the current situation.

The tensions between the USA and China, the ongoing shortage of skilled workers and the challenges facing Germany as a production location make a positive outlook difficult. However, it is precisely in these difficult times that precise data allows us to see the situation more clearly and make informed decisions.

Despite all the adversity, they show us positive developments that offer our industry great opportunities. Digitalization and the climate-neutral transformation are opening up new perspectives and strengthening our competitiveness in the long term.

With a sound understanding of current trends and a clear vision for the future, you will be equipped to master the challenges ahead and take advantage of the opportunities that present themselves. I hope this book will help you do just that.

2. Sectors of German mechanical engineering

The numbering of sectors in this part follows VDMA sector classification.

An alphabetical register of the specified sectors is to be found on page

88

For some sectors the definition as regards content does not match the statistical classification. For this reason sums for subgroups are sometimes denoted by names that differ from the sector name.

Explanatory notes

Definition mechanical engineering:

As far as possible mechanical engineering is displayed according to the VDMA definition, which is as follows: official statistics in Germany are collected according to the German subdivision of NACE (Klassifikation der Wirtschaftszweige, WZ 2008), which shows "Manufacture of machinery and equipment" in chapter 28. VDMA adds data concerning service like installation, repair and maintenance from chapters 33.12 and 33.20. The resulting aggregate is called "Mechanical engineering". For some data the old classification WZ 2003 is still in use, where "Manufacture of machinery and equipment" is found in chapter 29. In addition to mechanical engineering this chapter includes manufacture of weapons and ammunition as well as manufacture of household appliances, which do not belong to mechanical engineering as it is understood by VDMA. Thus the two sub-units are subtracted and parts of the neighbouring chapters 28 and 31-35 are integrated.
If data according to chapter 29 (NACE) is displayed, it is titled "Mechanical engineering including weapons and household appliances".

Register:

The register for official statistics in Germany normally comprises all enterprises with 20 and more employees.

As far as the "Monatsbericht" a monthly report on data for employees, turnover and incoming orders is concerned, the coverage of the reporting enterprises has been changed from 2008 on. Only for this report the register comprises only enterprises with 50 and more employees.

Official statistics in Germany follow different concepts. On the one hand data is collected for local units, on the other hand for kind-of-activity units. According to the local unit principle a unit with a combined production program will as a whole be attributed to the sector in which the heavyweight of its production lies. According to the kind-of-activity principle all data will be separately collected for the different sectors.

Generally the tables in our statistical yearbook follow the kind-of-activity unit principle.

Only tables 1.3, 1.4, 1.24 and 1.25 contain data that is collected according to local units/enterprises principle. In these tables data for turnover and number of employees differ from those in other tables.

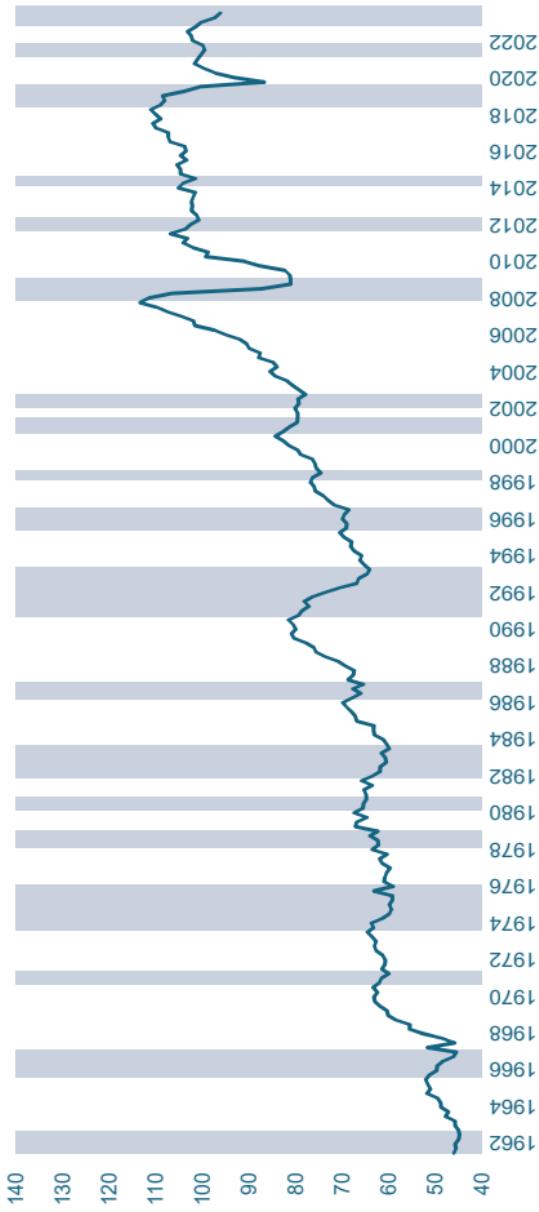

All data for Germany displayed in the yearbook refer to the respective register. Industry classifications in other countries often refer to different registers. Especially the selected characteristics of mechanical engineering in part III are not fully comparable with the German figures. Please consider the footnotes on the respective pages.

*) Mechanical engineering according to WZ 2008 chapter 2 (excl. repair and installation).

**) Data refer to all local units with more than 50 employees.

For reasons of continuity the statistical offices of Lower Saxony, Hesse, North Rhine-Westphalia, Bavaria and Bremen keep on publishing data for local units with at least 20 employees.

*) Activity sectors according to the german sub-division of the Classification of Economic Activities (WZ 2008). Though some sectors sound similar to VDMA sectors a comparison is not possible.

1) Contains among others process plant and equipment, packaging machinery, scales.

2) Contains woodworking machinery and tool holders.

3) Contains among others printing machines, assembly and handling technology, industrial robots and dryers.

4) According to WZ 2008 chapter 28 (excl. repair and installation).

The numbering of sectors in this part follows VDMA sector classification.

Numbers 17, 21, 24, 27, 28 and 32 are vacant. There is no data available for the sectors 40 (Automation and management of home and buildings), 41 (Electrical automation), 42 (Electronics, Micro and New Energy Production Technologies), 43 (Software and Digitalization) as well as 44 (Waste treatment and recycling).

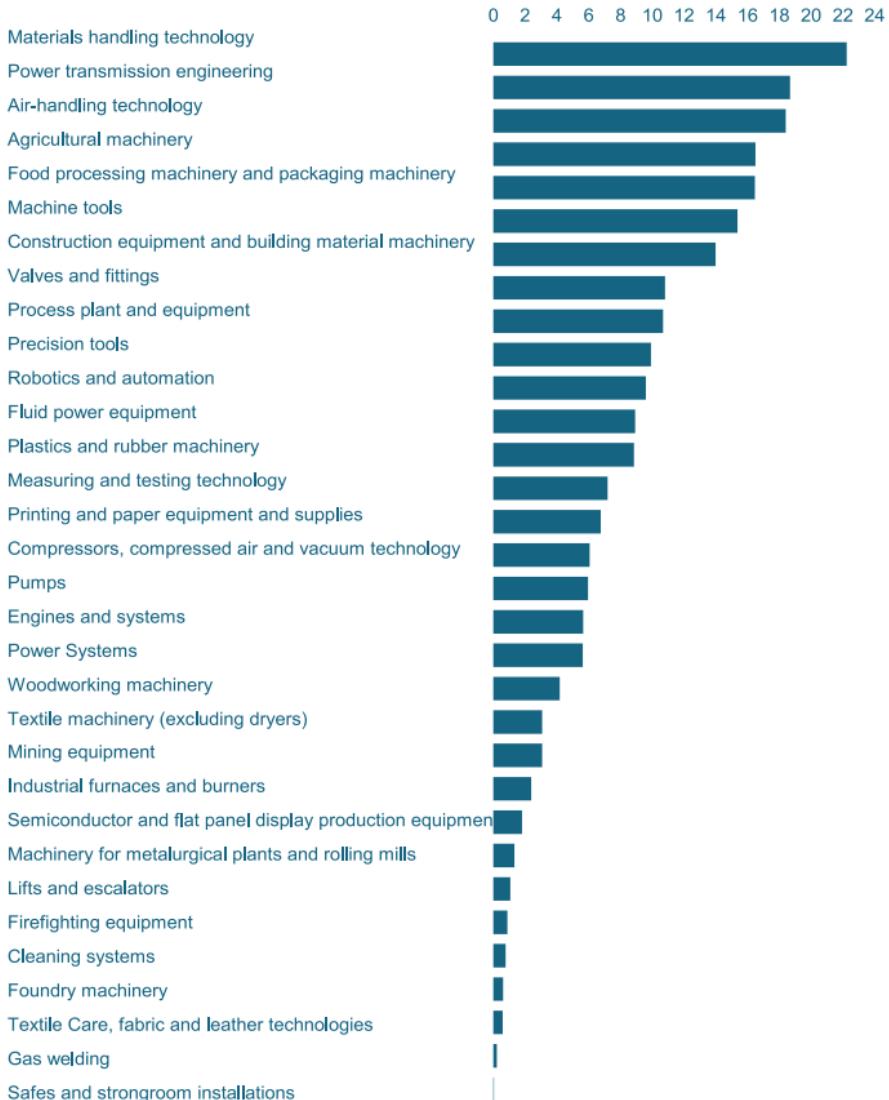

For some sectors the definition as regards content does not match the statistical classification.

For this reason sums for subgroups are sometimes denoted by names that differ from the sector name.
