

Dennis Rendschmidt

Power Systems

Managing Director of VDMA Power Systems & Chairman of the WindEurope Working Group “National Association CEOs”

Germany is the lead market in Europe for on- and offshore wind energy and the largest market in terms of installed base, expansion and political ambitions in Europe. Germany is also one of the central hubs for the production of wind turbines and key components.

To boost the wind industry in Germany and Europe, VDMA Power Systems collaborates with its members on politics, technology and innovation. We develop measures, advocate in Germany and on European level, engage in standardization, and drive research.

Together with the wind industry, we strive for:

Constant growth of projects

Reliable and resilient supply chains and operated models

Favorable framework conditions for production and operation

These objectives must be reinforced through **fair competition**, a **stable market** and **robust infrastructures** in Europe! Ensuring the resilience of the wind industry in Europe is a central topic of our association's work. I am dedicated to advancing these priorities on behalf of **manufacturers, suppliers and operators** in Germany and beyond in the WindEurope Management Committee.

As long-standing partner of WindEurope, VDMA Power Systems has been active in the board and in the working group NA-CEOs as well as in various other working groups for many years. We cooperate closely with the other German wind associations and we are in regular contact at WindEurope level.

Biography

- Managing Director of VDMA Power Systems since 2021
- More than 15 years experience in the wind and energy sector
- Leading positions in various associations (BDI, DVGW)
- Consultant in the energy sector with A.T. Kearney
- Ph.D. in Economics

About VDMA Power Systems

VDMA Power Systems is an association for energy plant construction based in Germany. We represent all major European manufacturers of on- and offshore wind turbines, together with more than 200 suppliers along the value chain.

For a strong and prosperous wind industry in Europe!
